### Projects

---

#### Bug Bounty System

September/2020

Bug Bounty is an application designed for business level and development level users to report and track bugs on the different internal applications we use within Revature. Bug Bounty is unique in that it provides gamification of the bug fixing process through a score associated with resolving bugs. This will allow for more inherent competitiveness throughout the process or bug fixing across Revature's suite of enterprise level applications.

#### SnapGram

August/2020

SnapGram is a novel social media platform that allows users to post, share, and view photos posted by other users. Anyone can register for a new account. Signed-in users can view all the posts on the platform by navigating to other user pages. SnapGram leverages AI to assist users in the classification of their posts by automatically generating tags and potentially more fields. Users have the ability to edit, delete, and add posts to their own pages.

#### Reimbursement System

August/2020

The Expense Reimbursement System (ERS) will manage the process of reimbursing employees for expenses incurred while on company time. All employees in the company can login and submit requests for reimbursement and view their past tickets and pending requests. Finance managers can log in and view all reimbursement requests and past history for all employees in the company. Finance managers are authorized to approve and deny requests for expense reimbursement.
